THE COUNCIL ON SOIL AND WATER CONSERVATION.

FILTER FENCE INSTALLATION REQUIREMENTS:

1. The filter fence shall be a渗要SEED of the following:
   - The fabric shall be 10 OUNCE PER SQUARE YARD (MIN.).
   - The fabric shall be replaced promptly.
   - The fabric shall be stapled, theed, or wired.
   - The fabric shall be spliced approximately one-half the height of the barrier.
   - The fabric shall be designed to conform to the existing grade, prepared and seeded.

2. Posts for filter fence shall be either 2 x 2 or 2 x 3 INCH STUDS OR 6 POLES minimum pair linear post steel with a minimum length of 2 FEET. Steel posts shall have projections for fastening wire to ground. Some filter fences require a main backing, consult manufacturer’s instructions for proper installation requirements.

3. The height of the barrier shall not exceed 30 INCHES.

4. The height of the barrier shall be founded deep enough to prevent the entry of water. The fabric shall be placed 10 FEET away from the toe of the slope.

5. The barrier shall be anchored in place at the toe of the slope. The barrier shall be anchored securely into the ground (minimum of 36 INCHES).

6. The barrier shall be anchored securely to the posts with 6 INCHES OF FABRIC extending into the trench.

7. Filter barriers shall be removed immediately after each rainfall and at least once during program. Removal and repair shall be made immediately.

8. Should the fabric decompose or become ineffective prior to the end of the expected double life and the barrier is still necessary, the fabric shall be replaced promptly.

9. Sediment deposits shall be removed when they reach an approximate depth of the height of the barrier.

10. Any sediment deposits remaining in place after the filter fence is in place for an adequate period of time shall be dredged to conform to the existing grade, prepared and seeded.

SILT FENCE EROSION BARRIER SHALL BE INSTALLED DOWN-GRADIENT OF THE CONSTRUCTION AREA PRIOR TO THE START OF CONSTRUCTION.

THE MATERIAL SPECIFICATIONS, INSTALLATION REQUIREMENTS AND MAINTENANCE PROCEDURES FOR EROSION CONTROLS SHALL BE IN ACCORDANCE WITH THE CONNECTICUT GUIDELINES FOR SOIL EROSION AND SEDIMENT CONTROL (REVISED 2002) BY THE CONNECTICUT COUNCIL ON SOIL AND WATER CONSERVATION.

THE CONTRACTOR SHALL BE RESPONSIBLE FOR CONSTRUCTION INSPECTION AND MAINTENANCE OF EROSION CONTROLS. EROSION BARRIERS SHALL BE INSPECTED AFTER HEAVY RAINFALL FOR DAMAGE AND CLOSING DEPOTS SHALL BE MADE IMMEDIATELY.

AFTER FINAL GRADING ALL DISTURBED SOIL AREAS SHALL BE SEEDED AND MAINTAINED.

SILT FENCE EROSION BARRIERS MAY BE REMOVED AFTER THE AREA IS WELL VEGETATED AND FULLY STABILIZED.

SOIL EROSION & SEDIMENT CONTROL NOTES

1. FILTER FENCE BARRIERS SHALL BE INSTALLED DOWN-GRADIENT OF THE CONSTRUCTION AREA PRIOR TO THE START OF CONSTRUCTION.

THE MATERIAL SPECIFICATIONS, INSTALLATION REQUIREMENTS AND MAINTENANCE PROCEDURES FOR EROSION CONTROLS SHALL BE IN ACCORDANCE WITH THE CONNECTICUT GUIDELINES FOR SOIL EROSION AND SEDIMENT CONTROL (REVISED 2002) BY THE CONNECTICUT COUNCIL ON SOIL AND WATER CONSERVATION.

THE CONTRACTOR SHALL BE RESPONSIBLE FOR CONSTRUCTION INSPECTION AND MAINTENANCE OF EROSION CONTROLS. EROSION BARRIERS SHALL BE INSPECTED AFTER HEAVY RAINFALL FOR DAMAGE AND CLOSING DEPOTS SHALL BE MADE IMMEDIATELY.

AFTER FINAL GRADING ALL DISTURBED SOIL AREAS SHALL BE SEEDED AND MAINTAINED.

SILT FENCE EROSION BARRIERS MAY BE REMOVED AFTER THE AREA IS WELL VEGETATED AND FULLY STABILIZED.
